“Ride-On stays where it should, on the tire tread. No mess when you take the tires off the rim either.”

“A must-have for long distances. Simply pull the nail out and you’re good to go.”

“Ride-On ensures an even wear on both tires.”

“I’ve been using Ride-On for years and all this time I’ve never needed balancing weights. Great product!”

“I don’t sense any vibrations any more, even at high speeds.”

Ride-On® Tire Protection

info@ride-on.eu
www.ride-on.eu
shop.ride-on.com/en
Ride-On Tire Protection is a unique tire sealant and balancing gel in one formula. The high-tech gel creates a liquid coating on the inside of the tire that binds to the tire tread. Ride-On seals tires, helps maintain proper tire pressure, prevents flats and balances. You’ll benefit from more safety, less inconvenience, reduced fuel costs and a longer tire lifespan.

**WHAT IS RIDE-ON?**

Ride-On preventsively protects against flat tires.

Ride-On lowers the temperature in your tires by 7%. This increases the lifespan of your tires and reduces the risk of a blowout.

Ride-On prevents dangerous situations caused by a flat tire.

Ride-On stays effective during the entire lifespan of the tire.

Ride-On is active up to 300 km/hour.

Ride-On continuously balances tires, for a smooth ride.

Ride-On reduces the rolling resistance thanks to perfectly balanced tires.

**HOW DOES IT WORK?**

Ride-On creates a coating that seals the tire tread on the inside of the tire, and reduces porosity by 500%. This helps to keep tire pressure optimal and lowers the temperature inside the tire, resulting in reduced tire wear and increased tire lifespan by 25% on average.

Ride-On contains aramid fibers (Twaron™) which are 6 times stronger than steel. These fibers seal punctures permanently and within seconds, without noticeable pressure loss. The risk of a flat tire or blowout is significantly reduced.

Ride-On also hydrodynamically balances the tire/rim combination, to help optimize the rolling resistance, increase your driving comfort and reduce road noise.

Ride-On seals 95% of all holes and punctures up to 6.4 mm in the tire tread. While driving, within seconds and without noticeable pressure loss.

Ride-On continuously balances the tire/rim combination in a hydrodynamic* way. This optimizes the rolling resistance and increases tire lifespan by 25% on average.

Ride-On protects the inside of your rims and tires from all sorts of rust and corrosion.

Ride-On reduces the porosity of your tires by 500%. Your tires maintain proper pressure much longer, which helps reduce tire wear and fuel consumption.

Ride-On is effective at temperatures between -40°C and over 100°C.

Ride-On can be applied in combination with TPMS (tire pressure monitoring system) sensors.

Ride-On is biodegradable, contains no carcinogenic chemicals and is not flammable.

**SAFER ON THE ROAD WITH RIDE-ON**

Ride-On reduces Carbon Footprint

**WHY RIDE-ON?**

- Safe and carefree motorcycle driving
- No more vibrations, even at high speeds
- Traditional balancing methods become unnecessary
- No more need for unsightly balancing weights

* Hydrodynamics is the study of fluid dynamics, which describes the movements of fluids
